Livetrack & Mobile Thermal Printer Bluetooth

Inspectors and Large animal Veterinarians:

With the Livetrack reader, the solution allows you to print a receipt of the animal id, without using a handheld and third party software to print.

The unique print function on the reader itself is an **industry first**. Saving costs to the user, since there is no need to purchase a portable handheld; and software in order to print out a receipt. The Livetrack reader now has the print function built into the reader, along with our rugged mobile thermal printer; it is the perfect and cost effective way for Inspectors and large animal Veterinarians to read Animal EID tags, and then simply print the receipt of the Animal EID's delivered or picked up, for the export or import of livestock.

With the Livetrack printer function on the reader, and our new mobile thermal printer, you can quickly print a receipt with all the import information needed.

The perfect solution for Inspectors, large animal Veterinarians, transports and cattlemen who transport their own cattle.

Printer Specs: Full printer datasheet available
